3. Medieval people did not distinguish between entertainment (which people expect to pay for) and general merriment, of the sort that anyone could take part in at festive times. They regarded both as 'play,' as opposed to work, and they called entertainers 'players.' The Church taught that idleness was a sin, that players were idle and that it was idleness to watch them. 4. Microwave works mainly by agitating or shaking the molecules of water within the food. A molecule that shakes or vibrates more has more heat energy, that is, it gets hotter. The heat energy is transferred from each water molecule to the other molecules around it. The food cooks inside, rather than from the outside inwards as in a normal oven. The process also continues for a time after the microwaves are switched off. So \_\_\_\_\_.

- ① microwaves made by the magnetron are led along the hollow waveguide and into the general oven compartment
- ② the most likely place for microwaves to escape is around the door seal when this gets loose or broken
- ③ food from a microwave oven is left to stand for a time afterwards to finish cooking
- ④ the cooking can be paused for a short period by stopping the magnetron and revolving platter
- ⑤ the door is locked shut and can't be opened while the oven is working

Although Albert Einstein's Theory of Relativity revolutionized physics, his mathematical models were based on the erroneous assumption that the universe is static—all the components are fixed in time and space. In order to maintain this view, when Einstein's equations predicted a universe in flux, he invented the "cosmological constant" to maintain the supposed constancy of the universe. Within ten years, the astronomer Edwin Hubble discovered that the universe was expanding, causing Einstein to abandon the idea of the cosmological constant. Almost a century later, physicists have discovered that some unknown force is apparently pushing the universe apart, leading some scientists to conclude that Einstein's "cosmological constant" may in fact exist.

- ① The observations of Hubble severely damaged the Theory of Relativity.
- ② One of Einstein's most significant discoveries was the cosmological constant.
- ③ Einstein's Theory of Relativity is fundamentally flawed.
- ④ The cosmological constant, while erroneously derived, may actually play a part in describing the universe.
- ⑤ Physicists today still make use of Einstein's cosmological constant to describe the universe.

Elizabeth Barret Browning, a feminist writer of the Victorian Era, used her poetry and prose to take on a wide range of issues facing her society, including "the woman questions." In her long poem *Aurora Leigh*, she explores this question as she portrays both the growth of the artist and the growth of the woman within. Aurora Leigh is not a traditional Victorian woman—she is well-educated and self-sufficient. In the poem, Browning argues that the limitations placed on women in contrast to the freedom men enjoy should incite women to rise up and effect a change in their circumstances. Browning's writing, including *Aurora Leigh*, helped to pave the way for major social change in women's lives.
